GTronix 360° impresses with its versatile properties where high precision and long-lasting effect is required.

Corrosion Protection

Due to the *Water-Block-Effect*, a protective film is formed around the components after treatment with GTronix 360° provides long-lasting moisture and corrosion protection.

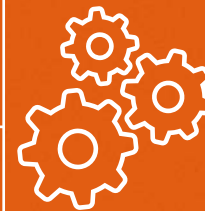

Releasing

Without great effort, you will get smooth screw threads and low-friction surfaces in shortest time. You can prevent damage and inconveniences of this kind by using GTronix 360° already with new components.

High performance through **Water-Block-Effect!**

precise effect and effective
water displacement

Lubricate

In contrast to classic creep oils, GTronix 360° offers an enormous water displacement due to the strong emulsion suppression. It does not mix with moisture and guarantees thereby excellent lubricating properties.

Cleaning

Contaminated components and surfaces can be cleaned quickly and effectively thanks to the high creeping ability of GTronix 360°, even after a short exposure time. The resulting protective film also greatly facilitates future cleaning work.
